**Responsibilities:**

Metal welding tasks, equipment handling, quality checks, safety compliance, workshop support

**Description:**

Welder Worker jobs in Finland are in strong demand due to the growth of manufacturing, metal fabrication, shipbuilding, and industrial projects. Finnish companies require skilled and semi-skilled welders to support factories, workshops, and construction-related production units. This job is suitable for lower-level workers who have basic welding knowledge, as well as experienced welders looking for stable overseas work.

As a Welder Worker, your main duties include welding metal parts using standard techniques, preparing materials, handling tools, and checking finished work for quality. You may work on steel structures, machinery parts, or industrial components depending on the company. Safety is very important in Finland, so workers must follow all safety rules and wear protective equipment at all times.

Candidates should have basic technical knowledge of welding and the ability to work carefully and accurately. A high level of education is not required, but a trade certificate or practical training in welding is a strong advantage. Previous experience in factory welding, fabrication work, or industrial workshops increases your chances of selection. Employers also value workers who are reliable and willing to learn new methods.
